

MOTION

Council District 7 (CD 7) was awarded a State of California, Housing and Community Development Department Encampment Resolution Fund (ERF) Grant in the amount of \$5,041,400.16 on September 27, 2024. CD7 partners with service providers to house and provide services for people experiencing vehicular homelessness in the community of Pacoima. Through these efforts 33 individuals have been placed into permanent housing. This ERF Grant funds service providers to prepare participants for permanent housing. Service provider efforts focus on ensuring document readiness and connecting the remaining encampment residents to vital mental health and substance use support services. In order to meet the obligations of this grant, and continue providing services CD7 is seeking an additional service provider contract.

On November 6, 2024, Council adopted CF 23-1443-S1, which instructed the Office of the City Administrative Officer (CAO) to be the designated grant administrator for the ERF Grant.

I THEREFORE MOVE TO AUTHORIZE the City Administrative Officer, or designee, to execute a contract with Hope the Mission to implement the Encampment Resolution Fund Grant - San Fernando Osborne program in Council District 7 in an amount not to exceed \$2,341,821.97, not to exceed a total of thirty-six (36) months, subject to the availability of funds, compliance with City contracting requirements, and approval by the City Attorney as to form;

I FURTHER MOVE that the City Administrative Officer be instructed and authorized to prepare, process and execute the necessary documents with and/or payments to Hope the Mission, or any other agency or organization, as appropriate, utilizing the above amount, for the above purpose, subject to the approval of the City Attorney as to form.

BUDGET & FINANCE

The Los Angeles Convention Center (LACC) is a vital economic engine for the City, generating significant tourism revenue, supporting thousands of local jobs, and serving as a premier venue for national and international events. As the City advances the approved LACC Expansion and Modernization Project (Council File 15-1207-S1), maintaining clear budget oversight and adherence to project timelines is critical to ensuring successful and timely delivery.

Given the scale and fiscal impact of this capital project, it is essential that the City Council receive updated information regarding the overall project budget, expenditure tracking, funding sources, and any emerging cost pressures that could affect established milestones.

I THEREFORE MOVE that the City Council instruct the City Administrative Officer (CAO), specifically the Project Executive, with support from the Bureau of Engineering (BOE), the Chief Tourism Officer, and any other relevant departments, to provide a verbal update at the next regular Budget & Finance Committee meeting on the status of the LACC Expansion and Modernization Project. The update should include:

- Current total project budget and funding breakdown;
- Expenditures to date;
- Identification of any cost overruns, funding gaps, or anticipated budget adjustments;
- Updated project schedule and key construction milestones; and
- Assessment of risks that could impact the timeline or budget performance.

MOTION

On February 18, 2026, a fallen power pole caused a full closure of Interstate 110 near Gaffey Street in San Pedro, resulting in significant traffic disruption and requiring an emergency response involving multiple agencies. The transportation facility serves as the sole arterial out of the harbor area for the San Pedro community.

During the response, City staff requested portable changeable message signs (PCMS) from the Los Angeles Department of Transportation (LADOT) to assist with traffic control and public notification. City staff were informed that no portable message signs were available for deployment at that time.

As the incident occurred on a state freeway facility, coordination with the California Department of Transportation (Caltrans) was required. The incident highlighted operational and communication challenges between City and State agencies regarding resource deployment, traffic control authority, and public information responsibilities. Portable traffic management equipment and clear interagency coordination protocols are critical during infrastructure failures and emergency roadway closures to ensure public safety, minimize congestion, and provide timely notice to motorists and nearby residents.

I THEREFORE MOVE that the City Council request the California Department of Transportation (Caltrans), Los Angeles Department of Transportation (LADOT), and Los Angeles Department of Power and Water (LADWP), in coordination with the Emergency Management Department (EMD), the Los Angeles Police Department (LAPD), and other any relevant agencies, to report back within 30 days with:

- A timeline of the response to the Interstate 110/Gaffey incident, including agency roles and communication protocols utilized;
- The availability, use, and protocols for electronic notifications to residents of similar road disruptions;
- The current inventory, location, and deployment status of portable changeable message signs and other mobile traffic control devices Citywide;
- Existing coordination protocols with Caltrans for incidents occurring on State freeway facilities within City boundaries, including delineation of responsibilities; and
- Recommendations, if any, to improve resource availability, interagency coordination, and communication for residents for future incidents.

AD HOC Recovery

MOTION

On December 5, 2025, the Council authorized the Bureau of Engineering (BOE) to pay AECOM up to an initial \$5 million for work and services performed in response to the 2025 January Wind and Fire Storm event, including preparation of three report deliverables, with any further payment for work on long-term recovery subject to the review and approval of the Ad Hoc Committee for LA Recovery and the City Council (Council File 25-0683).

Three AECOM planning documents were released this week on the topics of 1) Infrastructure Restoration, 2) Wildfire Resilience, and 3) Logistics and Traffic Management. These AECOM planning documents are helping to inform a comprehensive Long-Term Recovery Plan. Formal submission of these planning documents to the City Council under Council File 25-0683 will facilitate public access to the documents and the Council's oversight of the AECOM contract.

I THEREFORE MOVE that the Council INSTRUCT the Bureau of Engineering to immediately transmit the three AECOM planning documents released in February 2026 (Infrastructure Restoration, Wildfire Resilience, and Logistics and Traffic Management) to the City Council under Council File 25-0683.

MOTION

The role of technology has made life for consumers way more efficient, convenient and affordable. One of the major technological improvements is the proliferation of lithium-ion batteries in many personal devices. However, these batteries when not recycled or disposed of properly can have public safety and operational risks. In particular, the improper disposal of these batteries and even, nicotine/vape pen cartridges, can have chemical reactions that start fires if these items are surrounded by other combustible materials; and are commonly referred to as 'thermal runaway' events if the event happens within a compaction trash truck.

The City Council requires a report from the Bureau of Sanitation to review operations and the compliance policies in place to protect the public and workers from improperly disposed lithium batteries and vape pen cartridges and their potential dangers. The report should provide information of the current state of disposal and recycling process and the number of trash fire incidents. The report should provide a review of the public awareness program that outlines the proper disposal of batteries and vape pen cartridges. It should also include any recommendations to update city ordinances to improve the program or compliance.

I THEREFORE MOVE that the Bureau of Sanitation be instructed to report on the status and provide an assessment of the lithium-ion battery and vape pen disposal and recycling program with the intent of keeping them from being improperly disposed in collection vehicles or processing facilities in order to protect sanitation workers and ensure public safety.

I FURTHER MOVE that the Bureau of Sanitation be instructed to report on an expanded citywide public awareness campaign including the protocols of proper battery disposal; the number of incidents citywide related to truck fires due to improper battery and vape pen disposal; the accessible drop off points for the proper recycling or disposal citywide by Council Districts; and a budget estimate to properly implement and expand the disposal and recycling program.
